Chief Complaint: Low back pain

## History of Present Illness:

The patient presented for evaluation of low back pain.

1. Low back pain (started ~1 week ago; dull but becomes sharp with movement; severity 6-7/10).
2. Pain radiating to the right leg (intermittent).
3. Heavy lifting at work preceding symptom onset.

Patient consented to being recorded for AI scribe services for note-taking purposes.

## Past Medical History:

- None

## Past Surgical History:

- None

**Medication:**

- Ibuprofen (NSAID) as needed for pain (dose not specified in transcript)

**Allergies:**

- None

**Family History:**

- None

**Social History:**

- Work-related heavy lifting preceding onset of symptoms: Single recent event (about 1 week ago)
- Work-related heavy lifting; pain began after lifting heavy objects at work: Recent (triggered 1 week ago)

**Environment History:**

None

03/18/2026 19:55:08: None

**Review Of Systems:**

1. Musculoskeletal: Positive for low back pain; pain worsens with movement.
2. Neurologic: Denies numbness or weakness; reports intermittent radiation to the right leg.
3. Genitourinary: Denies bladder dysfunction.
4. Gastrointestinal: Denies bowel dysfunction.

**Physical Exam:**

None documented.

**Skin Testing:**

None

**Pulmonary Functional Test:**

No prior tests reported. If no improvement in 2-3 weeks from 03/19/2026 or symptoms worsen, consider imaging such as MRI (not yet performed).

**Pulmonary Functional Test Extra:**

None

**Other Tests:**

None

**Impression:**

None

**Follow up:**

Rest while maintaining light activity; apply heat or ice. Consider physical therapy if needed. Return for reevaluation if not improving within 2–3 weeks or if symptoms worsen; may consider MRI imaging at that time.

Time spent with patient: Time spent with the patient: 2:38 min, Time spent on documentation: 7 min, Total time: 9:38 min
